

WIND ENERGY

WE MAKE IT EASIER FOR FUTURE TECHNOLOGIES.

Whenever wind and weather conditions threaten to test the physical limits of power generation, lightweight structures come to the rescue. With a currently demonstrated length of up to 90 metres, the latest rotor blades for wind turbines try out the state of the art and maximise energy output.

WIND ENERGY

WHENEVER WIND TURBINES
DELIVER RENEWABLE ENERGY,
OUR PRODUCTS ARE ON TOP OF IT.

Your benefits:

- Pore free quality / aerospace quality with VAP
- VAP process reproducibility
- Higher bending and torsion stiffness of the blade
- No additional tooling
- Higher achievable lengths and thicknesses with the VAP process for more production efficiency and quality
