

# MEDICAL

## OUR COMPOSITE STRUCTURES PROVIDE THE BASE FOR HEALTHY GROWTH.

In health care, whenever push comes to shove, a few seconds can make the difference between life and death. There are situations where the necessity to handle a heavy and bulky medical apparatus may have grave consequences. Under such circumstances,

it would be much better if doctors and paramedics could use lightweight medical equipment built with composite structures. This would enable hospital staff to handle equipment with more ease and less stress, providing faster and better service to patients.

WHENEVER MEDICAL  
TECHNOLOGY SAVES LIVES WE  
ADD WEIGHTY ARGUMENTS.

## YOUR BENEFITS

- Lightweight handling
- More compact than usual reanimations boards
- Specially interesting for air-rescue
- Higher board stiffness with improved reproducibility
- X-ray transparency of carbon fibre
