

NAVAL

WE MAKE FAIRINGS INVISIBLE TO RADAR

The fairings for submarine masts enhance stealth capabilities even

when various masts have been raised during surface navigation.

NAVAL

STEALTH TECHNOLOGY – CUSTOMIZED FOR YOUR PROJECTS

COMPOSYST has been designing its own Radar Absorbing Materials (RAM) for over a decade, which enable submarines to remain largely undetectable, even above the waterline.

YOUR BENEFITS

- Fairings for inner steel mast structures to prevent detection by radar systems
- Complete development and construction of entire mast systems made of FRP
- Own design and production of active radar-absorbing materials and structures
- Wide variety of masts and other submarine parts
- Active reduction of radar signature
- Decades of experience in naval radar systems
- Active supplier for radar absorbing structures and materials
